

## LORBRAND DISTRIBUTOR

## LORBRAND STEEL ROLLERS, IMPACT AND RUBBER DISC ROLLERS

LORBRAND has a large range of rollers to suit most conveying applications. This enables the customer to choose the most cost-effective alternative. The revolutionary centrifugal self-cleaning action of the seals ensures that bearings are able to reach their designed life. Grease-free sealing elements result in much lower friction values than conventional designs.

Impact and rubber disc rolls consist of steel reinforced rubber impact discs press fitted on a conventional steel roller body. Each rubber disc is positively located and there is no possibility of rubber moving due to impact loads. Spacers and end-stops are not required.

Apart from the rubber discs the same components and seals are used as for the steel rollers. Installations include coal, gold, platinum, diamond and copper mines, coal and grain loading terminals and various quarries and plants.

## LORBRAND PULLEYS

- Capable of manufacturing pulleys up to 2m diameter and a 6m shaft length.
  - Offer standard( turbine ) & engineered( t-bottom ) pulleys.
    - 100% Ultrasonic testing of all welds.
    - Xray testing can be offered.
  - Hot vulcanized, cold vulcanized and ceramic lagged pulleys offered.
    - ISO 9001 - 2008 accredited.
